

Thank you for being a trial  
customer of RecondOil Box

A close-up photograph of a glass being poured with a golden-brown liquid, likely oil. The liquid is captured in mid-pour, creating a smooth, tapered stream that falls into a clear glass container below. The background is dark, making the liquid stand out. The lighting highlights the texture and color of the oil.

# Your data is important to us. But it can also give you valuable business insights

## #circularuseofoil

The RecondOil Box is the latest addition to our Double Separation Technology product family. We fully believe that it can change the way the industry perceives oil. The mission now is to collect input to optimize its functionality. For us, and for you.

As a trial customer of RecondOil Box, you are important to us. But the data we collect from the trials can also make a difference for you. It can give new valuable insights for your business. How much can you save on avoiding oil changes? How many filter changes can you avoid? What is the impact on your CO<sub>2</sub> footprint if you reuse oil instead of disposing of it?

Cleaner oil also makes your machines perform better. How much energy can you save thanks to less friction? How much can the availability of your machines increase? How much can maintenance needs be reduced?

By helping us collect test results, you'll also get relevant data. Data that will show you improvements, both in terms of environmental impact, cost reduction and production efficiency. Data you can use in your own process improvements, reporting, marketing, or however you see fit.

We appreciate your cooperation and look forward to your first test results.

## Here's how to collect the data

1.

Once the RecondOil Box is installed on your machine, we will run it for 2-3 months before collecting the first results.

2.

You will receive an email from your SKF representative with a set of questions to answer.

3.

You can submit the answers on your own, or request support from your SKF representative.
